DETAILED ACTION

Election/Restrictions

- Restriction to one of the following inventions is required under 35 U.S.C.
 121:
 - I. Claims 28-30, drawn to a control method for a drive system, classified in class 322, subclass 28.
 - II. Claims 31-34, drawn to a control method for a traction drive system, classified in class 180, subclass 15.
 - III. Claims 35-38, drawn to a hybrid vehicle device, classified in class 180, subclass 65.2.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because equalizing the speed of the two motors regardless of the loss of traction is not required by invention I. The subcombination has separate utility such as detecting

Art Unit: 2834

a drop in a motor which is related directly to a loss of traction, matching currents of different motor, repeating the process until the currents are equal. Such inventions, I and II describe different methods that can be implemented to different invention.

Page 3

3. Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because invention III discloses a vehicle having a first motor attached directly to the wheel and a generator which supplies power to the motor, not a battery. Moreover, a fuel engine provides power to the generator, not another second motor. The subcombination has separate utility such as implementing the control method wherein the speed of the motors are measured and compared to each other and further, taking the average speed of the two motors and matched to a speed set point.

Art Unit: 2834

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper and because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Julio C. Gonzalez whose telephone number is 571-272-2024. The examiner can normally be reached on M-F (8AM-5PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Darren Schuberg can be reached on 571-272-2044. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
